DETAILED ACTION

Restriction/Election

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-6 (in part), and 9-14 (in part) drawn to compounds where **X** in formula 1 is carbon and forms 7-10 membered ring, classified in class 540, subclass, various.
 - II. Claims 1-6 (in part), and 9-14 (in part) drawn to compounds where **X** in formula 1 is nitrogen and forms 7-10 membered ring, classified in class 540, subclass, various.
 - III. Claims 1-6 (in part), 7-8, and 9-14 (in part) drawn to compounds where **X** in formula 1 is nitrogen and forms 6-membered ring (diazines), classified in class 544, subclass, various.
 - IV. Claims 1-6 (in part), and 9-14 (in part) drawn to others (compounds does not belong to Groups I-III), classified in class 546, subclass, various.

The inventions are distinct, each from the other because of the following reasons: Groups I-IV are directed to structurally dissimilar compounds such that the variable core created by the varying definitions of **X** in formula 1 do not belong to the same recognized class of chemical compounds in the art, and references anticipating one invention, would not render obvious the others. For example, Group I that are drawn to 7 to 10-membered ring with one nitrogen are different from Group II, because Group I contains one nitrogen in the 7 to 10-membered ring. Group II are different from Groups

Art Unit: 1624

I, and III-IV, because the 7 to 10-membered ring contains two nitrogens. Group III (diazines) are different from Groups I-II and IV, because a diazine ring contains two nitrogens in the ring that is not present in Groups I-II and IV. Group IV are drawn to groups that do not fall into Groups I-III (i.e. 5-membered ring with one nitrogen, 5-membered ring with two nitrogens, and 4-membered ring with one nitrogen). Thus, separate searches in the literature as well as in the U.S. Patent Classification System would be required. Each group's compounds are made and used independently of each other and could support separate patents. The compounds differ significantly in chemical structures. One skilled in the art would not consider such diverse structure equivalents of each other.

If Group IV is elected; tentative election of a single species is required.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions anticipated by prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Because these inventions are distinct for the reasons given above and have acquired separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to Mr. Gabriel Katona on July 23, 2002 to request an oral election to the above restriction requirement, but did not result in an election being

made. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
